25X1

1. During October 1953, four new oil wells were supposed to have been put into production at SEB Bockfliess. All Bockfliess wells were good eruptive producers with a low oil-water ratio. It was planned to bring in four new wells each in November and December 1953.
2. At the end of October 1953, 13 drill rigs were working at SEB Bockfliess, five at SEB Prottes and three or four at SEB Aderklaa.
3. The combined SEB Bockfliess and SEB Matzen production of crude oil supposedly reached 7,200 metric tons per calendar day by 1 November 1953. The production was to have increased to 7,500 tons per day by the end of November.
4. Drillings at Aderklaa will be resumed after Christmas 1953. [redacted] four new drilling towers will be brought from the USSR and erected at Aderklaa. I

Comment. It is not clear whether the drill rigs at Aderklaa referred to in paragraph 2 actually were operating. drilling at Aderklaa ceased by about 15 October.
